

Waste Management and Resource Recovery Centres

Turning waste into a resource

Veolia Environmental Services

Turning waste into a resource

Veolia operates a number of world class facilities for the consolidation, recycling, and treatment of solid waste. Our EPA licensed facilities provide clients with recovery/disposal solutions that are practical, cost effective and protect the environment.

Veolia Environmental Services (Global) - Did You Know?

- > Veolia Environnement invests \$190 million into R&D each year
- > 7 million tonnes recycled each year
- > 100 composting facilities
 - Producing 700,000 tonnes of compost
- > 219 Waste Sorting and Recovery Facilities
 - Recover 2 million tpa of cardboard and paper
 - Recover 1.1 million tpa of construction material
- > 433 waste drop-off centres managed
- > 280,000 tonnes of contaminated soil treated

Wide Range of Materials Accepted

Materials accepted depend on the license conditions for the particular facility. Materials range from household putrescible and commercial waste through to low-level contaminated waste from industrial facilities.

At a number of our waste management centres and resource recovery facilities, Veolia enables the drop-off of a range of materials which can be diverted for recycling or materials that can be harmful if disposed to landfill. These materials include:

- Household hazardous chemicals & paints
- Electronic equipment
- Building materials
- Steel
- Glass
- Cardboard and paper
- Plastics
- Green waste

Transfer Stations

The efficient and timely disposal of large volumes of household and commercial waste relies on the utilisation of intermediary facilities called transfer stations. At Veolia's facilities, waste is deposited by collection vehicles and then sorted into categories for subsequent collection and transfer to appropriate landfill or recycling destinations.

Engineered Landfills

There will always be a need to dispose of residual waste and the disposal of this material must be handled with maximum care and attention.

Veolia runs a comprehensive network of easily accessible landfill sites across Australia to support its collection business activities. With a wide range of wastes accepted at our sites, combined with extensive capacity, Veolia can provide an effective solution to your disposal requirements.

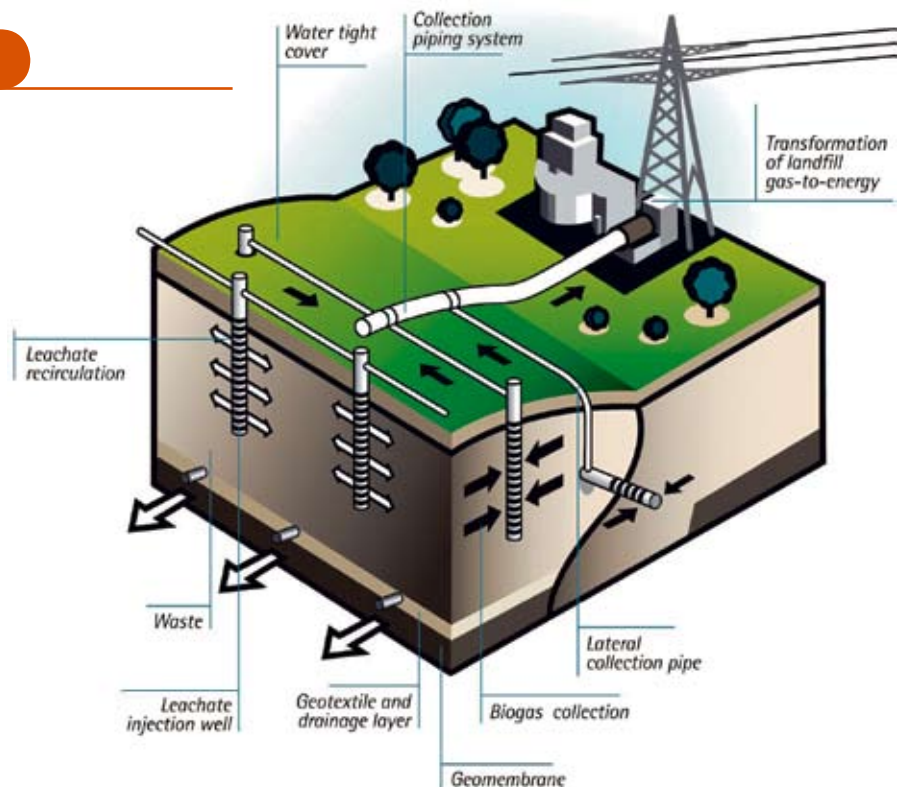

Each Veolia landfill is managed to the highest environmental standards, with strict adherence to the relevant legislation and Environment Agency guidelines, enabling us to fulfill our customer's own quality and environmental requirements.

Bioreactor Landfill Technology

The Bioreactor technology that Veolia utilises is a cost-effective waste treatment and energy recovery process that maximises the efficient production and capture of biogas which is used to produce green energy. Bioreactors have an extensive network of pipes to provide for leachate and water re-circulation to substantially enhance biogas capture.

Veolia operates two Bioreactors, one at Woodlawn (NSW) servicing the Sydney market, and the other located at Ipswich, servicing the Brisbane market. These facilities also provide an important role in the remediation of former above-ground mine operations.

Landfill Site Remediation

Veolia takes its maintenance responsibilities extremely seriously. Our landfill sites are monitored for a period of at least 10 years after their working life has ended. In both construction and capping of landfill sites, Veolia uses the best available technologies, which meet or exceed regulatory requirements.

Resource Recovery Facilities

Veolia also designs, builds and operates a range of facilities that recover resources for beneficial reuse. These include:

- > Composting operations
- > Material recovery facilities
- > Construction waste recovery operations
- > Electronic waste recycling facilities
- > Liquid waste recovery facilities
